Yunmai Document Recognition SDK is a handy development kit that was designed to help advanced computer users such as programmers and software developers implement OCR (Optical Character Recognition) capabilities into their applications. Users can integrate the functions mentioned above in PC programs and mobile applications alike. The OCR features can make it possible for the end-user to extract text fragments from image files and even create text documents that can be edited later without considerable effort. These abilities can come in handy especially whenever it is needed to process a lot of paper documents by turning them into virtual ones. Developers who choose to implement the functions mentioned above can enhance their programs significantly with various capabilities. For instance, OCR-friendly applications can extract text from an image or a non-editable document and create a new, editable one. However, Yunmai Document Recognition SDK packs extra features, such as automatic image cropping or automatic document position detection and edge trimming for more accurate results. Additionally, in some cases it is possible to receive suggestions straight from the host application since the engine can detect potential errors and offers suggestions for both words and characters. Organizing scanned content is also one of the features this SDK comes with. Scanned images can be automatically placed into a few possible categories, which include ID card, business card, passport or text document.

I read this was a good topic for me and to educate newbies into sharpening. I just did a review of how to sharpen pocket knives with a jewelers saw blade in the VEGAS SHARP cut thread and included an attachment. This is in response to the 1st reply; Rofkumpra I have never heard of a jewelers saw blade as a good way to sharpen a knife. If I am not mistaken about how the jeweler's saw blade works there should be a cutting wire at the edge of the blade. The pocket knife above is meant to be used as a VESSEL for sharpening not to be used as a DIGITAL SCALER. To sharpen a pocket knife with a jewelers saw blade will not provide a sharp edge for the pocket knife as is determined by a blade that is sharp for ALL pocket knives with the same blade. An alignment of a blade will not provide a sharp knife. To sharpen using a jewelers saw blade will become brittle and break off of the edge of the blade. An sharp edge for all pocket knives with a particular sharpening tool is determined by the sandpaper that the particular sharpening tool's edge is sharp on.
